Neural Network Model

(Effect of Net_k on Calculated Error is known from O/P Layer)

For Layer "j"

$$Net_j = \sum_i w_{ij} O_i$$

$$O_j = f(Net_j) = \frac{1}{1 + e^{-Net_j}}$$

Note: Layer "j" is NOT Output Layer

X X X

$$E = \frac{1}{2} \sum_j (t_j - O_j)^2$$
