Neural Network Model

(Weights of Output Layer AFFECTS Calculated Error)

For Layer "j"

$$Net_j = \sum w_{ji} O_i$$

$$O_j = f(Net_j) = \frac{1}{1 + e^{-Net_j}}$$

↑

Previous Layer Layer (0)

↑

Current Layer is Output Layer (You are here)

If Layer "j" is Output Layer:

$$E = \frac{1}{2} \sum (t_j - O_j)^2$$
