Recall

Correctly Classified (as Positive)

Total objects that should be retrieved (Actually

Meaning

Does the classifier *miss* any of Positive Objects ?

Recall = $\frac{TP}{TP + FN}$

Recall = $\frac{28}{28 + 2} = 93.3\%$

	Predicted as	P	N
Actual	P	TP	FN
	N	FP	TN

	Predicted as	P	N
Actual	P	28	2
	N	30	40

Positive

Classified as +ve

Positive

Classified as -ve

Higher Recall means I HIGHLY trust you if you said I picked ALL Positive Objects.

It Does NOT mean All you said Positive are Actually Positive
