Neural Network Model

(Effect of Net_k on Calculated Error is known from O/P Layer)

For Layer "j"

$$Net_j = \sum w_{ji} O_i$$

$$O_j = f(Net_j) = \frac{1}{1 + e^{-Net_j}}$$

↑

Previous Layer (l)

↑

Current Layer (You are h

$$E = \frac{1}{2} \sum_j (t_j - O_j)^2$$
