Input to Quadratic Equation Solver

Put quadratic equation in the form:

$$\frac{1}{2}\lfloor x \quad P \quad x \rfloor^{\top} q \quad x$$

where:

X *is a Vector of size d*1 ,*

P *is a Matrix of size d*d ,*

q^{T} *is a Vector of size 1*d ,*

?

Put all ≤ , ≥ constraints in the form:

$$Gx \leq h$$

where:

m *is Number of constraints ,*

X *is a Vector of size d*1 ,*

G *is a Matrix of size m*d ,*

h *is a Vector of size m*1 ,*

Put all *Equal "="* constraints in the form:

$$Ax = b$$

where:

m *is Number of constraints ,*

X *is a Vector of size d*1 ,*

A *is a Matrix of size m*d ,*

b *is a Vector of size m*1 ,*
